Check the Three Points

Find where a stalled project is stuck by checking its field, its hard change and its will.

YOU NEED

one sheet of paper, a pen, one stalled project

THE WORKING

1. Write the name of the stalled project at the top of the page.
2. Under point nine, write if the field is still open and the conditions still hold.
3. Under point three, write if the hard change has truly happened or if you are pretending it has.
4. Under point six, write if you still want this and if the target has drifted.
5. Circle the point that returns a no.
6. Write one act for that point, White to reset the field, Black to finish the change, Red to restart the desire.

WRITE IT DOWN

Write the circled point, the date, and the one act you chose.

LOOK AGAIN

In seven days, read the page and note if you did the act and what the project did after it.
